

What are the expected results?

The beneficial effects of Extracorporeal Pulse Activation Technology (EPAT®) are often experienced after only 3 treatments. Some patients report immediate pain relief after the treatment, although it can take up to 4 weeks for pain relief to begin. The procedure eliminates pain and restores full mobility, thus improving your quality of life. Over 80% of patients treated report to be pain free and/or have significant pain reduction.

Is it safe?

Yes. This FDA cleared technology was developed in Europe and is currently used around the globe. A wealth of medical experience, state-of-the-art engineering, and optimal quality have been built into each EPAT® device; and extensive clinical studies and tests have confirmed its safety and efficacy.

If performed by a qualified caregiver, Extracorporeal Pulse Activation Technology (EPAT®) has virtually no risks or side effects.

What is the duration of the treatment and how many treatments will I need?

Treatment sessions take approximately 5-10 minutes depending on the disorder to be treated. Generally, 3 treatment sessions are necessary at weekly intervals.

What will happen after the treatment procedure?

You will receive post-treatment instructions from your physician to follow during your recovery.

What if I have a special health condition?

The safety and effectiveness of the EPAT® procedure has not been determined on people with the following health conditions. Your doctor will provide you with information about how these and other conditions might affect the determination to perform the EPAT® procedures.

- ▶ Malignancies
- ▶ DVT (Deep Vein Thrombosis)

How is the treatment performed?

Coupling gel is applied to the specified treatment area to enhance effectiveness. After these preparations, EPAT® pressure waves are released via the applicator which is moved over the area in a circular motion.

Why consider non-invasive EPAT®?

EPAT® has a proven success rate that is equal to or greater than that of traditional treatment methods (including surgery) and without the risks, complications and lengthy recovery time. EPAT® is performed in your physician's office/clinic, does not require anesthesia, requires a minimal amount of time, patients can immediately bear weight (i.e. walk), and return to normal activity within a few days of the procedure.

Benefits of EPAT®

- ▶ Non-invasive
- ▶ No anesthesia
- ▶ No risk of infection
- ▶ No scarring
- ▶ No downtime
- ▶ Over 80% patient satisfaction
- ▶ Faster, easier healing
